There are 3 different kinds of STIsSTDs: bacterial, viral, and parasitic. Bacterial STIs/STDs are curable through treatment with antibiotics. Curable, that is, as long as you see a health-care provider, get tested and treated, follow through on all the medication, avoid sexual contact until cured, and make sure your sexual partner(s) get tested and treatment as well.

Proteomics is the large-scale study of proteins. Proteins are vital parts of living organisms, with many functions. The proteome is the entire set of proteins produced or modified by an organism or system. Proteomics enables the identification of ever-increasing numbers of proteins. This varies with time and distinct requirements, or stresses, that a cell or organism undergoes. Proteomics is ...

Given the variety of ways that arthropods can be associated with human disease, there are many instances in which laboratory identification can aid in confirming a clinical diagnosis (e.g., in cases of envenomation or nuisance biting), developing a differential diagnosis (e.g., in cases where the implicated arthropod is a known vector of disease-causing organisms), or guiding clinical management.

Gregory A. Hawkins, in Basic Science Methods for Clinical Researchers, 2017 Overview of Whole Genome Sequencing (WGS) WGS is the most global approach to identifying genetic variations. Although Sanger sequencing was used to analyze the first human genome, Sanger sequencing has not developed in scale during the last decade, and thus Sanger sequencing is cost- and time-prohibitive for WGS.

The final stage of bacterial respiration involves a series of membrane-embedded components collectively known as the electron transport chain. The final step in the chain may involve the use of the enzyme cytochrome oxidase, which catalyzes the oxidation of cytochrome c while reducing oxygen to form water (10). Cholesterol is the substrate for steroid biosynthesis. Conversion of cholesterol to pregnenolone occurs in the mitochondria, and oxidative reactions catalyzed by P450 enzymes occur in the smooth endoplasmic reticulum and mitochondria. Sources of cholesterol include lipoprotein uptake from serum (LDL and HDL), de novo synthesis from acetate via the acetyl coenzyme A pathway, and hydrolysis of ...
